

A Walk on the Side

an introduction to R for data analysis

*Online
edition!*

...

GW Libraries Workshop
September 14, 2020

go.gwu.edu/rworkshop

Logistics

- Schedule:
 - 10-12 R, with ~2 breaks ☕
 - 12-1 Lunch break
 - 1-3 R, with ~2 breaks ☕
- Sheldon and Kiri can provide individual help
- Webex
- We'll be using these 🖐️ ✅ ❌ and, if needed, breakout rooms

Goals

Learning Objectives

A WALK ON THE **R** SIDE

[Hopefully] You will learn how to do some of the following:

- Set up your laptop with R & RStudio
- Write and run an R program in RStudio
- Use variables of different types in R
- Use vectors and data frames in R to represent data
- Import & export data files
- "Wrangle" data in R
- Explore data in R with basic statistics and data visualizations
- Learn how to look for help to overcome obstacles

Agenda

- About R and RStudio
- Along the way: How to get help
- Hands-on:
 - variables
 - logical expressions
 - values, vectors, and data frames
 - R Studio projects
 - reading in data
 - exploring data
 - data wrangling:
cleaning and reshaping
 - data visualization
 - data analysis
 - functions
 - R Markdown / reports
- Resources for further learning

Acknowledgments

Teaching basic lab skills
for research computing

DATA CARPENTRY

BUILDING COMMUNITIES TEACHING UNIVERSAL DATA LITERACY

R Tutorial

An R Introduction to Statistics

Workshop Housekeeping

Mute unless you want to speak

Use Chat to ask questions and help each other out

Ask questions!

Respect every question and person asking the question

Help each other out!

If something is confusing in the workshop, let us know.

About R

- Free/Open source
- Cross-platform (Mac, Windows, Linux)
- For statistical computing (and data visualization)
- CRAN - r-project.org
 - [R packages](#)
 - [R journal](#)

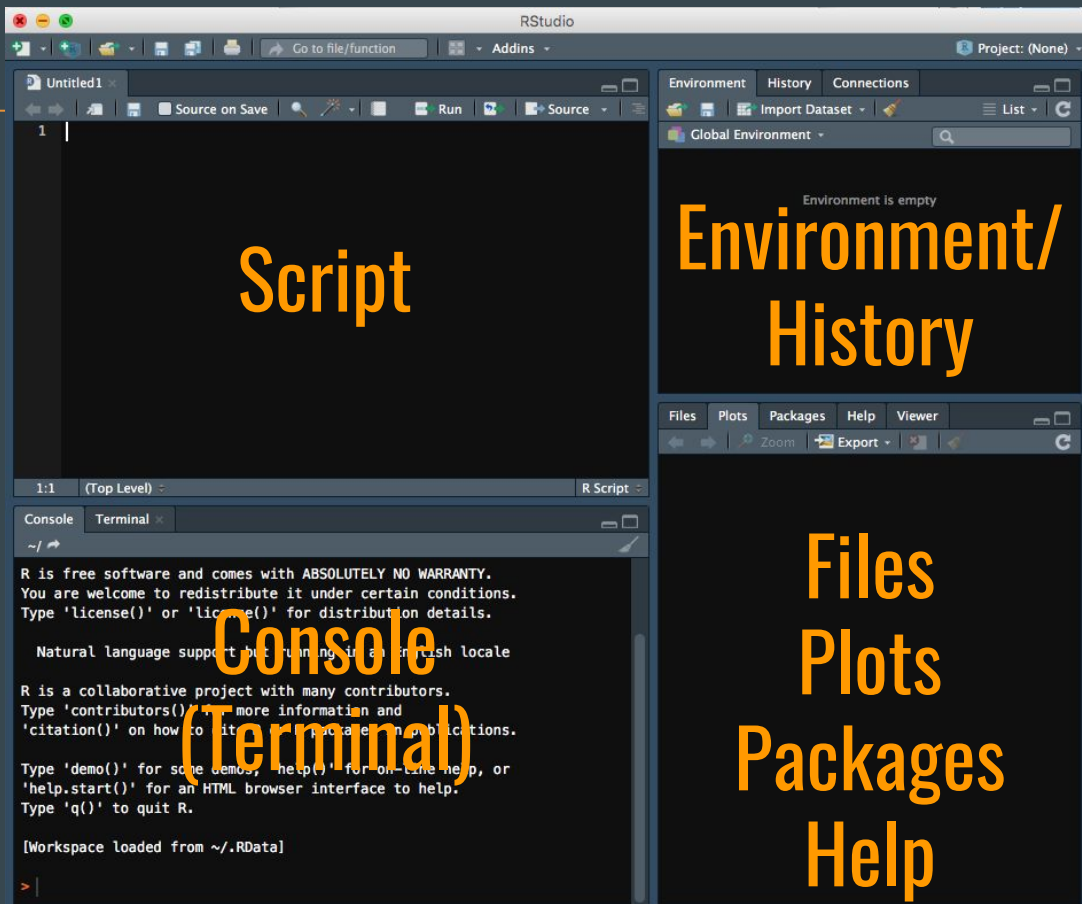

Reasons ReseaRcheRs pRefeR R

- Scripted language (vs. point/click)
- Features built around working with data
- Reproducibility
- Interdisciplinary
- Extensible
- Beautiful data visualization
- Community - RStudio Community, Stack Overflow

R Studio

A WALK ON THE R SIDE

Variables/Objects

"Binding" data to a named object/variable allows you to store data in memory and access it later.

```
x <- 5
```

```
y <- c("Washington", "Chicago", "Washington", "Boston")
```

```
z <- data.frame(pt_id = c("A001", "B204"), bpm = c(60, 72))
```

Variables

- Try using R as a "calculator" in the Console
 - Try some mathematical functions, too
- Create some variables
 - variable naming
 - `<-` for assigning values to variables (Option - on Mac, Alt - on Win)
 - numeric, character, logical
 - Watch the Environment pane!
 - `typeof()`
 - Coercion w/ `as.integer`, `as.character`, `as.logical`, `as...`

Logical Expressions

- Operators include:
==, <, >, ! (not), & (and), | (or), etc.

Basic Data Structures

Atomic Vector

10.2

Vector

1	10.2
2	11.3
3	11.5
4	12.0

Data Frame

	time	temp	boiling
1	51	10.2	FALSE
2	58	11.3	FALSE
3	63	11.5	FALSE
4	70	12.0	TRUE

Vectors

Vectors

- A vector is
 - A sequence of data elements (components) all of the same type.
- Create vectors with `c()` (short for "combine")

Let's pause to explore some useful tabs in RStudio

~ / R Projects / rstudio-testproject - master - RStudio

Workshop.R x gapminder x

Source on Save Run Addins

```
1 library('tidyverse')
2 gapminder <- read_csv('data/gapminder.csv')
3
4 by_year <- gapminder %>%
5   group_by(year) %>%
6   summarize(weighted_avg_lifeExp = sum(pop*lifeExp)/sum(pop))
7
8 # Plot the data (scatterplot)
9 plot(y = by_year$weighted_avg_lifeExp, x = by_year$year, col='blue')
10 # Build a linear regression model
11 mod = lm(data = by_year, weighted_avg_lifeExp ~ year)
12 # Plot the line
13 abline(mod)
14
15 # or using ggplot2:
16 ggplot(data = gapminder, aes(x=year, y=lifeExp, base_indent=1, color=continent))
17   geom_point() +
18   # ...
19
20 5:1 (Top Level) R Script

Environment History Connections Git

Global Environment

|           |                                |
|-----------|--------------------------------|
| df        | 3 obs. of 2 variables          |
| gapminder | 1704 obs. of 6 variables       |
| housedata | 1460 obs. of 81 variables      |
| lemod     | List of 12                     |
| mod       | List of 12                     |
| mx        | logi [1:3, 1:2] NA NA NA NA NA |
| mx2       | List of 6                      |

Values

|         |                         |

R: Reduces multiple values down to a single value

summarise (dplyr) R Documentation

Reduces multiple values down to a single value

Description

summarise() is typically used on grouped data created by group_by(). The output will have one row for each group.

Usage

```
summarise(.data, ...)
```

```
summarize(.data, ...)
```

Arguments

.data A tbl. All main verbs are S3 generics and provide methods for tbl_df(), dtplyr::tbl_dt() and dbplyr::tbl_dbi().

... Name-value pairs of summary functions. The name will be the name of the variable in the result. The value should be an expression that returns a single value like min(x), n(), or sum(is.na(y)).

Console

```
[1,]
[1,] 1
[2,] 2
[3,] "A"
[4,] "b"
[5,] 2
[6,] 2
> mx2 = matrix(list(1, 2, "A", "b"), nrow=2, ncol=2)
> mx2
 [,1] [,2]
[1,] 1 "A"
[2,] 2 "b"
> mx2 = matrix(list(1, 2, "A", 3, "b", 5), nrow=3, ncol=2)
> mx2
 [,1] [,2]
[1,] 1 3
[2,] 2 "b"
[3,] "A" 5
>
```

```

Data Frames

Data Frames

- A **data.frame** stores a data table
- Comprised of **vectors** of equal length. Vectors become columns.
- Columns and rows can have names.
- **tibble** (from the tibble package) has some advantages over **data.frame**

A brief word on **list** and **matrix**

Projects in RStudio

Projects in RStudio

Recommendations:

- Use [Github for] **version control!**
- Create **folders** to keep things organized

It's time to **import** some data!

Data Importing

- Prepare data as "tidy"
 - rectangular
 - one table per file
 - rows are observations, columns are variables
- Formats: CSV, TSV, Excel, Fixed-Width, JSON... and with the right packages: Stata, SPSS, SAS... (using **rio** or **haven**)
- A word about "big data" (consider **data.table**)

R Packages

Installing and loading R packages

- `install.packages('mypackage')`
- `library(mypackage)`

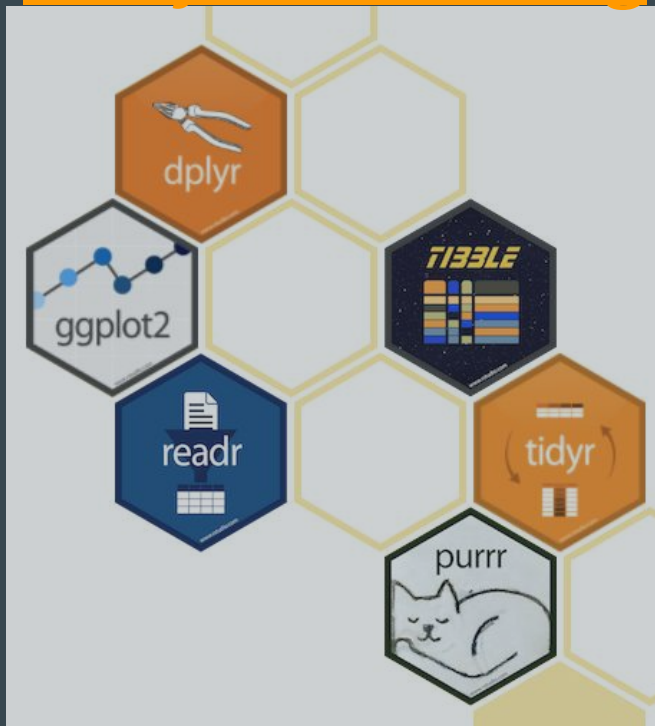

Tidyverse Core Packages

tidyverse.org

- ggplot2 - graphics
- dplyr - data manipulation
- tidyr - tidying data
- readr - reading in data
- tibble - modern data frame
- purrr - functional programming

Other often-used R packages

Loading in various data file types ♦ haven, readxl

Mapping ♦ rgdal, tmap, leaflet

Analyzing 2D and 3D shapes ♦ geomorph

Genomic data ♦ bioconductor

Cluster analyses ♦ cluster

Time series data ♦ forecast

Text mining ♦ qdap, sentimentr, tidytext

graph/network analysis ♦ igraph, sna

Interactive web visualizations ♦ shiny

Web scraping ♦ rvest

Exploring Data

- head, tail
- subsetting
- slicing and dicing

Data Wrangling

[flickr.com/photos/thewomensmuseum/3637975017/](https://www.flickr.com/photos/thewomensmuseum/3637975017/)

Data Transformation using the dplyr package

- filter()
- arrange()
- select()
- mutate()
- summarize()
- group_by()
- ...

You will want to use a "pipe": `%>%`
(shortcut: **control-shift-M**)

Data Tidying with dplyr

- `gather()`
- `spread()`
- `separate()`
- `unite()`

Joining with dplyr

"Merges" tables together

- `left_join()`
- `right_join()`
- ...

Data Visualization with "base R" and ggplot

Data Analysis

Functions

R Markdown

R Markdown

- A format for writing reproducible, dynamic reports with R (as HTML, PDF, MS Word, and more)
- rmarkdown.rstudio.com
- # Header 1
Header 2
Italic ****bold****
- Insert R code directly into your document

```
```{r setup}
your R code goes here
```
```
- Include LaTeX code with \$ or \$\$

R Shiny
